## Brand new SEDBUK Band A boilers from Main

UK boiler manufacture Main is delighted to introduce its new range of SEDBUK Band A boilers. Main Eco boilers have been designed with the independent merchant in mind, to offer a competitively priced, high efficiency product to satisfy the needs of your customers.

The Main Combi Eco is available in outputs of 25 and 30 kW, while the Main System Eco has outputs of 24 and 28 kW. All models are fully modulating down to 8 kW.

The new Main Eco range is straightforward to install, with an aluminium heat exchanger for a lower lift weight and pre-plumbed jig for easier, quicker installation. In addition, versatile flue options up to 20 metres make the range even more flexible.

Jim Boyce, Main Sales Director, says: "This new range of SEDBUK Band A boilers offers installers a product of the highest quality that has been designed with them in mind – competitively priced, easy to fit and easy to service. As with all Main products, we offer free of charge product training and technical support and service from **heateam**.

"Householders will love the Main Eco's clean design with user-friendly controls and display panels. Its impressive performance and energy efficiency means they will enjoy lower gas bills, too."

To celebrate the launch of this great new range of SEDBUK Band A boilers, Main has teamed up with Fernox and the first 7500 Main Eco boilers will include Fernox cleanser and inhibitor within the packaging.
