Main Combi 25 Eco impresses Which?

The Main Combi 25 Eco impressed independent consumer body Which? in its latest boiler report. The review said it was *'one of the most efficient combi boilers we've tested... ..Our engineer appreciated the good installation diagrams... ..and the simplicity of making the electrical connections'*. Which? awarded it 5-star ratings for efficiency, NOx emissions, features and ease of installing.

Designed exclusively for independent merchants and their customers, the Main Eco range of boilers was launched earlier this year and is competitively priced, easy to fit and easy to service. The Main Combi Eco is available in outputs of 25 and 30 kW, while the Main System Eco has outputs of 24 and 28 kW. All models are fully modulating down to 8 kW.

The aluminium/silicon alloy heat exchanger gives the boilers a lower lift weight and a pre-plumbed jig means easier, quicker installation. In addition, versatile flue options up to 20 metres make the range even more flexible.

Jim Boyce, Main's Sales Director, said: "We are delighted and very proud that Which? was so impressed with the Main Combi Eco. The range has been extremely well received by installers, who like the fitter-friendly features, and homeowners, who find it easy and economical to use."

Main offers free of charge product training and all products are backed by technical support and service from **heateam**. For more information please visit
